Combined Heating and Chilled water systems

Sealed system benefits

In today's demanding environment nearly all heating and chilled water circulating systems are designed to operate in sealed networks.

The main benefits over previous systems which used feed and expansion tanks to accommodate expanded water are many, large volumes of water are no longer required to be stored at the top of the building. Expansion vessels can now be used in place of the storage tanks and these can be placed anywhere in the building, usually in the basement where the weight is not such a problem. The Feed and expansion tank being open to atmosphere allowed water to evaporate making unnecessary demands on this precious resource.

Sealed systems reduce corrosion to an absolute minimum by sealing the system content from atmosphere, and only adding fresh water to replace losses through leakage.

Sealed systems also offer the possibility of operating at higher temperatures if required (Max 120°C) which permits lower circulation rates, smaller pumps and reduced pipe work dimension with obvious cost savings.

Pressurisation system guide Low-Medium temperature typical layout

Prefix Beta dual unit

Prefix Beta dual pressurisation sets bring the benefits of managing two independent systems from a single unit. The unit contains two individual display screens so each system can be controlled and monitored separately providing both systems operate at the same fill pressure which should generally be the case as the fill pressure is based on the building static height.

All other set points can be independently set for each system

All Prefix Beta Dual system units are supplied as two pump sets and are available in three ranges, 2.8 bar, 5.5 bar and 8.0 bar fill pressures.

Each pump is available to both systems so each system has a duty and standby pump available to it. If one pump fails then the standby pump will be available to both systems.

All the control features and specification are the same as the standard two pump Prefix Beta details

Pressurisation dual system guide Low-Medium temperature typical layout for heating and chilled water systems

Application

Prefix pressurisation units are designed to replace water that has been lost through system leakage and to maintain the system design fill pressure in sealed heating and chilled water systems in accordance with BS7074 parts 1, 2 and 3.

Prefix units also provide safety circuits locking out the boiler / chiller in the advent of high/ low pressures occurring. Expanded water is accommodated in membrane vessel/s that are supplied separately and normally installed alongside the Prefix unit.

Prefix units are perfect for either domestic or industrial environments. Three levels of sophistication are offered along with two pressure ranges for the Mini Prefix and single range for Micro Prefix units.

All levels provide volt free contacts that can be used to interface with either a Business Management System or any other type of monitoring system.

Prefix units have flow limiting devices to help prevent plant rooms from flooding in the advent of system pipe/fitting failure.

Control features

Prefix Beta MK 2 microprocessor

- Mains door interlocked disconnect switch.
- Auto/Manual/Off selector switch.
- Back lit digital display.
- Control panel section IP 54.
- MCB protected motors.
- Simple set point adjustment.
- Parameter lock.
- Remote inhibit.
- Delay start.
- Exercise regime.
- Break tank low water monitoring.
- Transducer controlled.
- High/Low pressure contacts for boiler/chiller interlock.
- Anti-bounce internal vessel 2lt electronically assisted.
- Isolating valves on each pump.
- Hours run for each pump.

Additionally twin pump units have:

- Automatic duty pump rotation with omission of tripped or failed pumps.
- Duty pump fail with auto change over to stand by pump.

LED indicators for:

- Pump run each pump.
- Pump trip each pump.
- Low pressure.
- High pressure.
- Duty pump failed.
- Excessive run time.
- Break tank Low water.
- Back lit display provides indication of power on.

Volt free contact for:

- Pump run each pump.
- Pump trip each pump.
- High pressure.
- Low pressure.
- Excessive run time.
- Break tank low level.
- Duty pump failed (two pump units).

Mini Prefix and Micro Prefix

- Switched mains isolator with neon indicators.
- Fuse protected motors.
- Auto/Manual/Off selected through display panel
- High contrast digital display.
- Transducer controlled.
- Simple set point adjustment.
- Parameter lock.
- Delay start.
- Exercise regime.
- Break tank low water monitoring.
- Hours run each pump.
- Isolating valves on each pump, Mini Prefix only.
- High/Low pressure switch for boiler/ chiller interlock.

Additionally twin pump units have:

- Automatic duty pump rotation.
- Duty pump fail with lockout and auto change over to standby pump.

Micro Prefix twin pump units

- Parallel operation

Neon indicator for :

- Power on.
- All other faults are shown scrolling through the digital display.

Volt free contact for:

- Common fault.
- High pressure.
- Low pressure.
- Boiler interlock Low/High pressure.

Expansion vessel sizing

Vessel sizing calculations should be carried out in accordance with BS7074.

Details of calculating method can be obtained from Lowara UK or we will be happy to calculate the required vessel size for you if you can provide the following data.

1. Static height above pressurisation unit.
2. System content (volume) if unknown boiler power (Kw) can be used to estimate system content.
3. Flow and return temperatures.
4. Glycol content (%).
5. Final working pressure.

Applied standards

- Machinery Safety Directive. 2006/42/EC.
- UK Health and Safety Requirements. 2008No.1597.
- Water supply (water fittings) regulations.1999.
- Electromagnetic compatibility (EMC) Directive 2014/30/EU.
- Code of practice for heating and chilled water systems. BS7074 Parts 1, 2 and 3.

Specification

All units are enclosed and manufactured from powder coated steel.

Pumps

Pumps are horizontal peripheral type with bronze/ composite body and impeller and are fitted with self adjusting mechanical seals for the Prefix Beta and Mini Prefix.

Micro Prefix units have oscillating pumps with built in non return valves. All metal parts in contact with water are Stainless Steel.

Coated steel

The Prefix Beta has individual sections for the electrical controls and the hydraulic equipment. The Mini and Micro Prefix have the electrical controls in a plastic control panel mounted at the top of the main steel housing. These units are suitable for either floor or wall mounting.

Break tank Prefix Beta and Mini Prefix

Manufactured from Polyethylene with an 18lt active capacity complete with weir and clip tight lid. Ball valve 15mm to BS1212 part 2 constructed to give a type AB air gap in accordance with the water regulations 1999.

Overflow 22mm (plastic).

Micro Prefix has a Stainless Steel tank 3lt active capacity tank fitted with WRAS approved ball valve and type AB air gap in accordance with the water regulations 1999.

Overflow 22mm (plastic).

Pipework

Nylon 4-10mm.

Internal vessel (Prefix Beta only)

2Lt steel construction complying with BS4814.

Electrical specification

Supply voltage: 230V 50Hz 1Ph

For other supply voltages contact our sales office.

Volt free contact rating: 50V AC 3A

The Prefix Beta and Mini Prefix units contain high quality bronze or Ryton pumps to help eliminate seizure due to infrequent operation.

Micro Prefix units are fitted with Oscillating pumps fitted with NBR seals.

All the above units include High/Low pressure contacts to interlock with the boiler/chiller.

Other options include specialised systems for large volume storage.

MicroPrefix single and twin pump units 2.5-4.5bar

AB air gap suitable for liquid upto category 5

Standard vessel details

The pressure vessel is designed to provide a storage facility and pressure reservoir for water. Common uses are in water booster sets, heating pressurisation and fill sets.

Vessel's are supplied pre-charged, but the pressure may require adjustment to suit the site conditions.

This adjustment must be made with the vessel isolated from the system, and before filling with water.

All pressure vessels should be installed with an isolating valve and drain cock.

XLC-in-house training, seminars and new product launches

With our Xylem Learning Centre we provide a learning environment that promotes the transfer of new skills and knowledge to the work setting through both classroom and technology-based instruction. Our training team comprises experienced individuals throughout the organisation who have expert knowledge of our products, markets and services. We are available to assist you and your organisation to meet your training needs.

There are people who do, and people who teach. We do both!

Xylem provides complimentary training in selection and use of all Xylem products at its training centers in Europe. The courses are designed to be practical as well as theoretical, preparing delegates with skills to size and specify the correct pumps and related technologies for a range of applications and systems.

Xylem/Lowara CPD presentations CIBSE accredited courses

One or two hour CPD seminars, at the clients premises, half and full day training can be arranged at company HQ in Axminster, Devon or at any location in the UK.

All courses cover the pumps, systems and variable speed drives. Xylem also offer HVAC application training, all are taught by experts in the field and comprehensive course notes are provided.

For up to date news on products, services and a complete calendar for training events and exhibitions please visit our web site www.lowara.co.uk

Xylem | 'zīləm |

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services, and agricultural settings. With its October 2016 acquisition of Sensus, Xylem added smart metering, network technologies and advanced data analytics for water, gas and electric utilities to its portfolio of solutions. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
